quanta_robot — LEGGED — Whole robot
built from link_dim_common + link_dim_legged and the STL files • marker = link origin • stepped red line = parent → child offset, split per axis

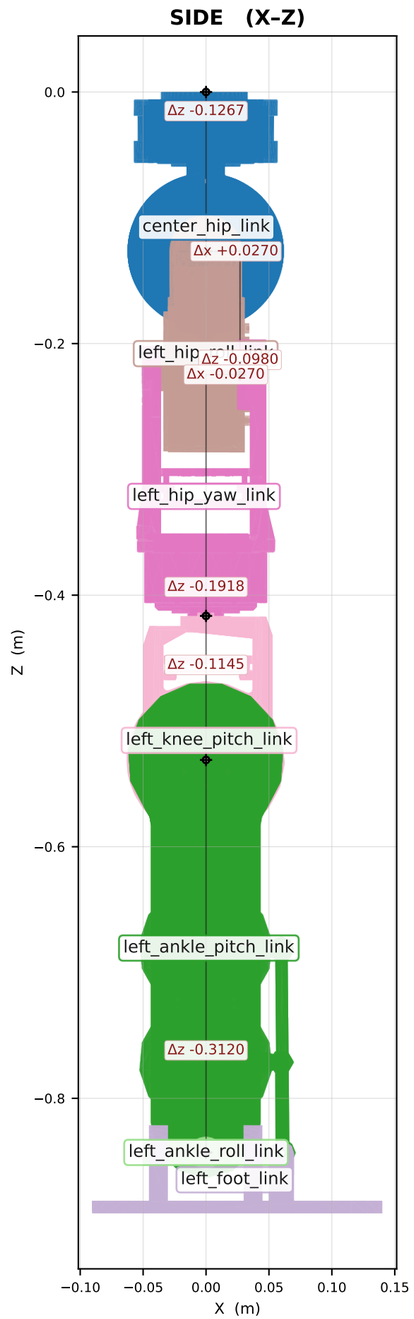

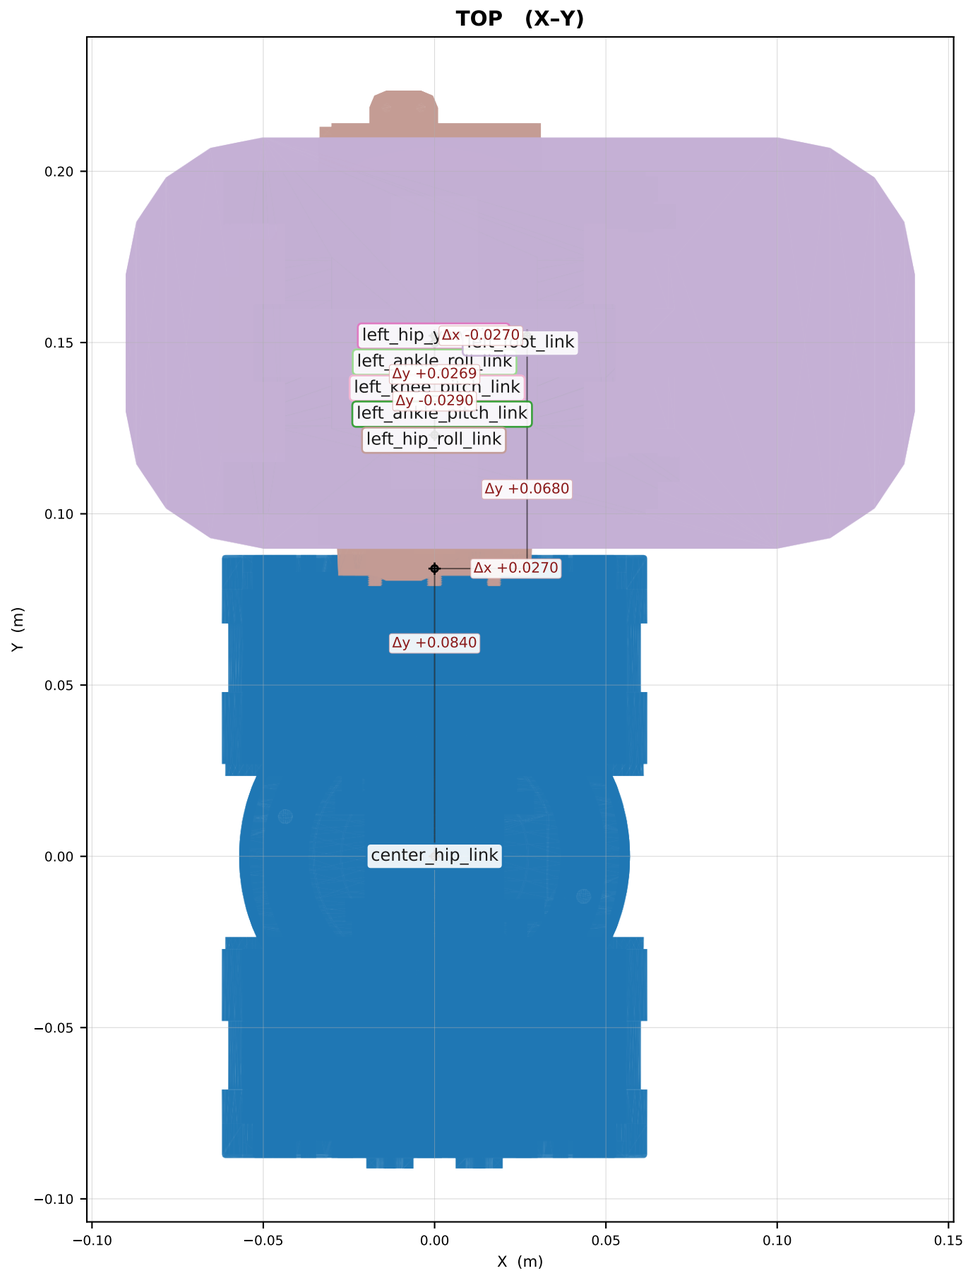

quanta_robot — LEGGED — Left leg
built from link_dim_common + link_dim_legged and the STL files • marker = link origin • stepped red line = parent → child offset, split per axis

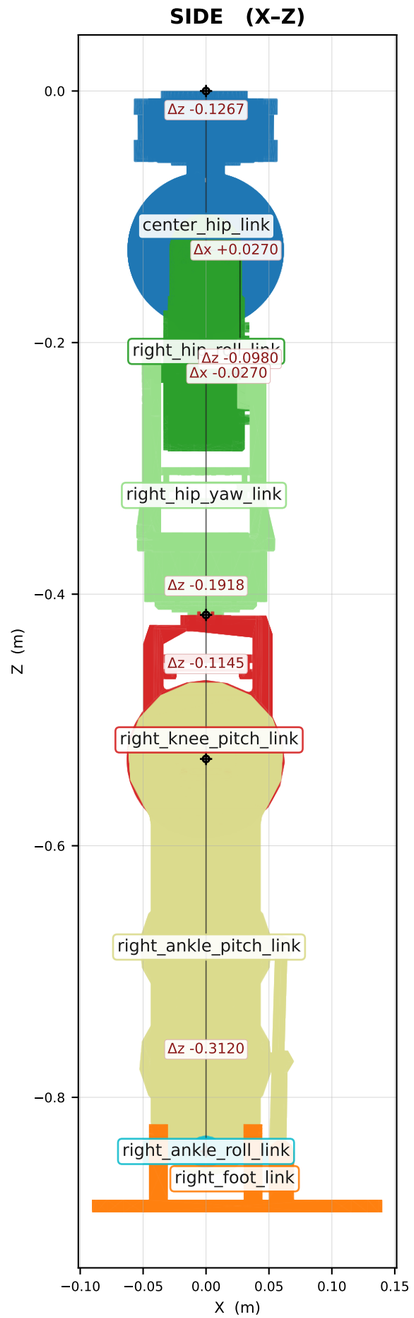

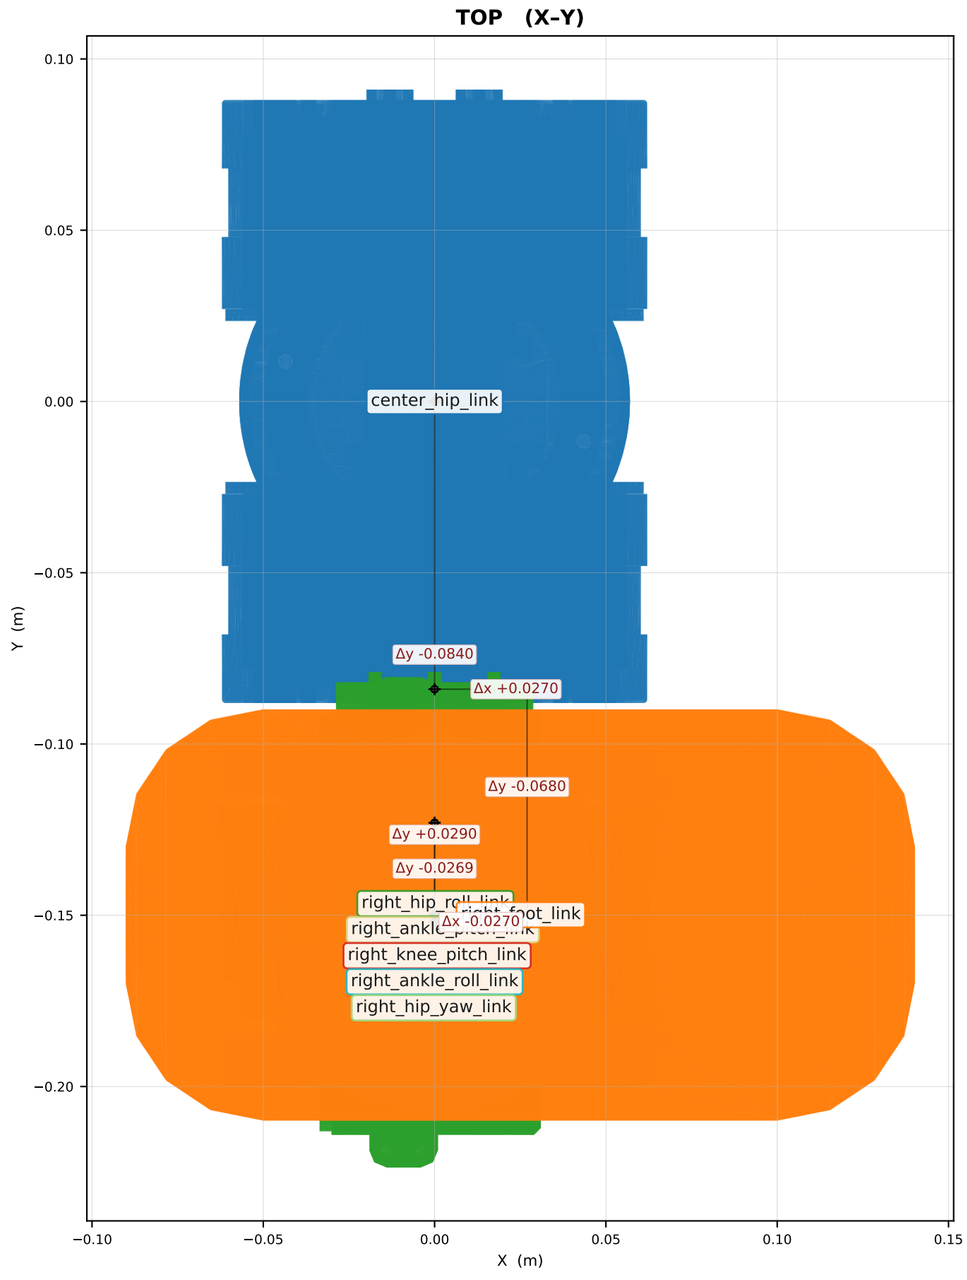

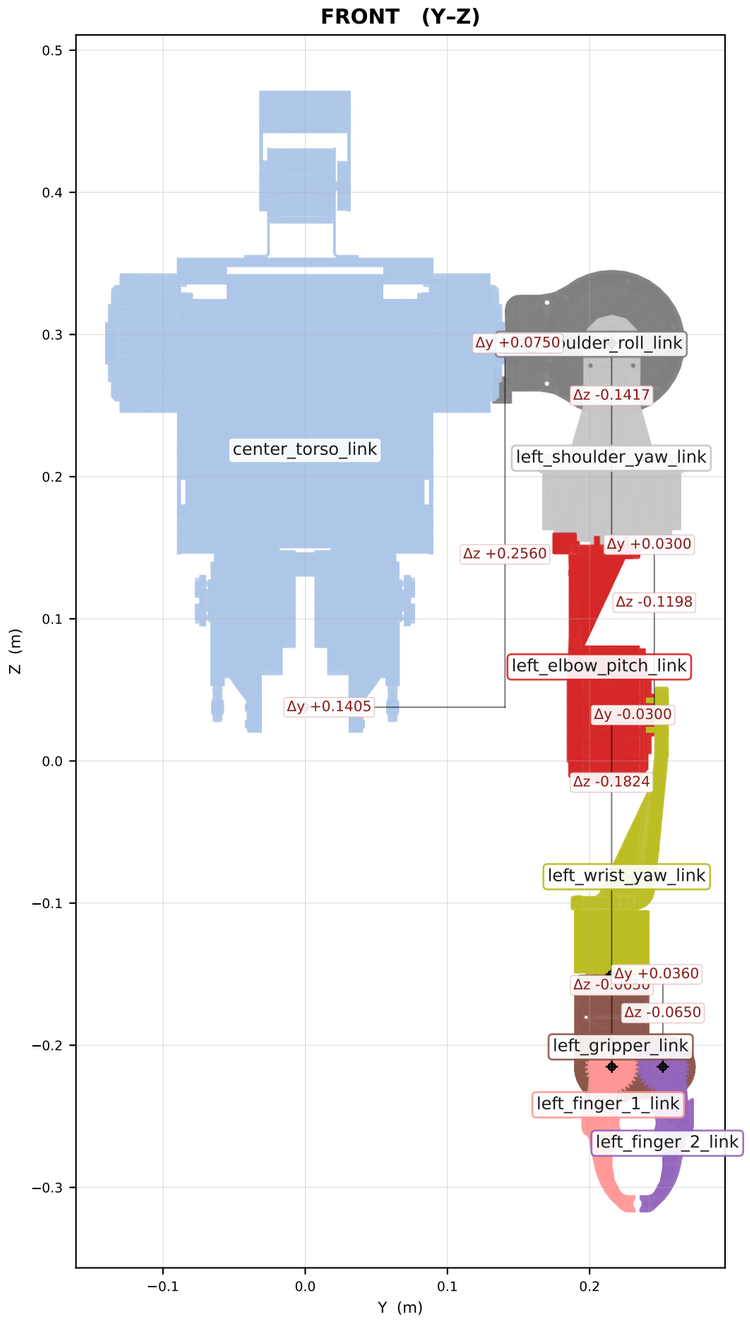

quanta_robot — LEGGED — Right leg
built from link_dim_common + link_dim_legged and the STL files • marker = link origin • stepped red line = parent → child offset, split per axis

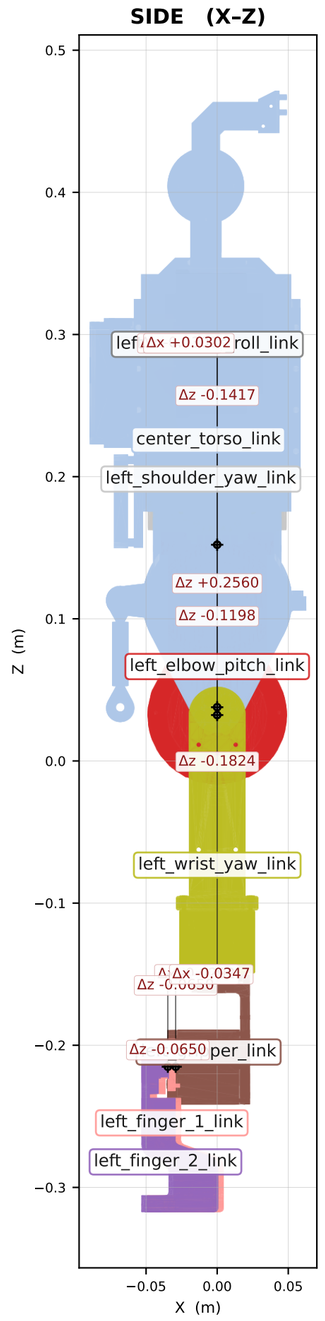

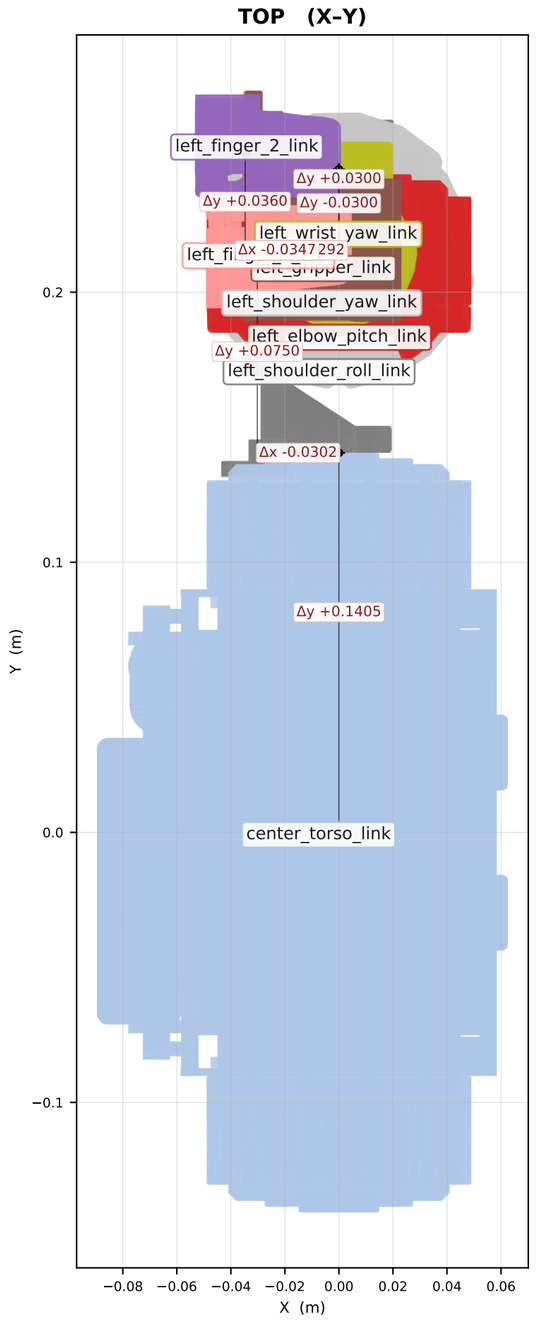

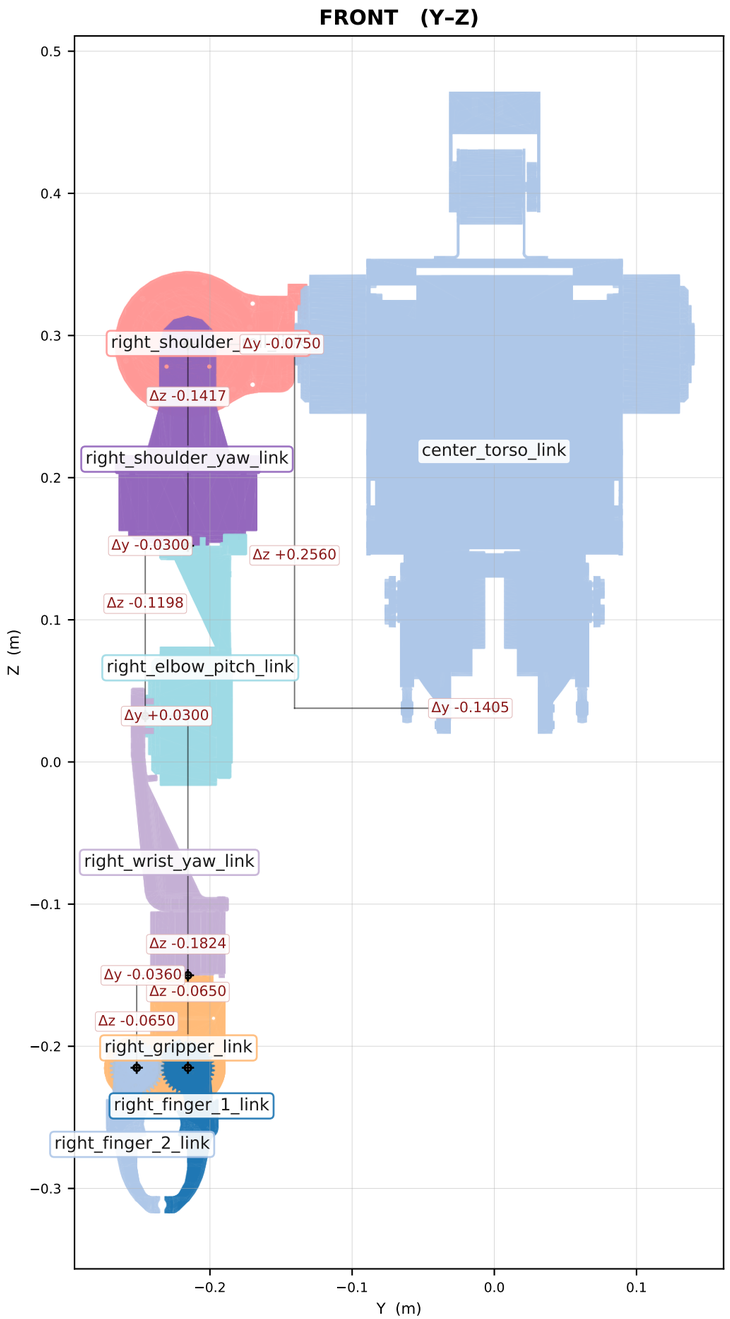

quanta_robot — LEGGED — Left arm
built from link_dim_common + link_dim_legged and the STL files • marker = link origin • stepped red line = parent → child offset, split per axis

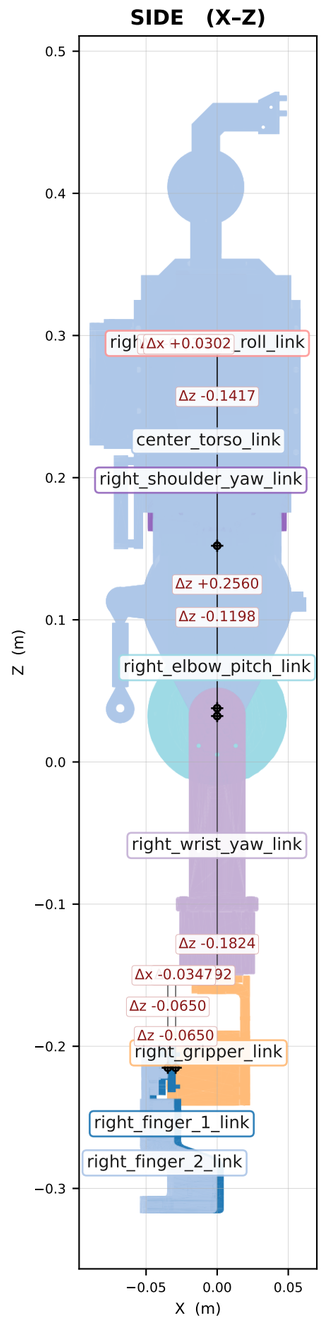

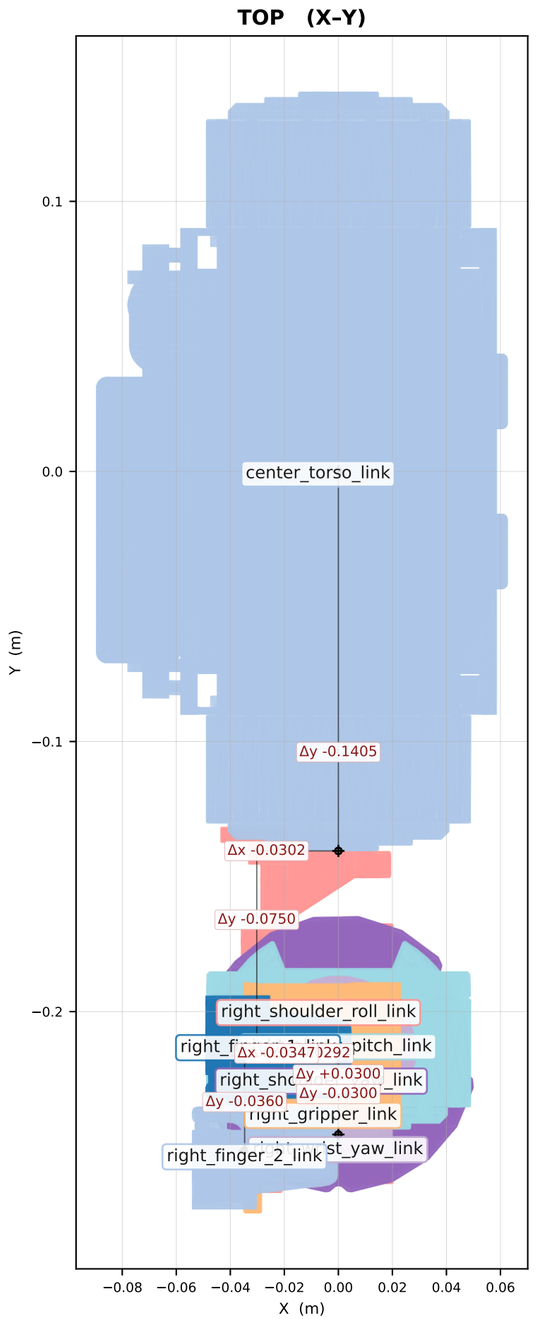

quanta_robot — LEGGED — Right arm
built from link_dim_common + link_dim_legged and the STL files • marker = link origin • stepped red line = parent → child offset, split per axis

quanta_robot — LEGGED — Torso / waist
built from link_dim_common + link_dim_legged and the STL files • marker = link origin • stepped red line = parent → child offset, split per axis
